

## Students' comments

### Positive:

- + The project topics are really interesting and challenging
- + A lot of choice for the project
- + Demonstration of the algorithms with Java applets during the lecture
- + Plenty of time for the lab

### Negative:

- Exercises in the first two labs are too easy.
- Some project topics are just extending the code one has written in the lab and some others are a lot more work. Every project should roughly have the same workload.
- The lecture slides should have a clearer structure and due to this the lecture sometimes seems a bit confusing. Maybe re-write the slides in Latex.
- Formulas in the slides should not be copied from the book but be re-written in Latex.
- Every single lecture stands for itself and lectures are hardly connected to each other.
